

Mind the Gael

Pricing Model Options · Decision Document · June 2026

The core product insight: a player's season has two natural plan moments, pre season (January) and the championship run up. Plans should be generated fresh at each moment against the player's current form and schedule. The pricing question is how players pay for those two moments. Four models follow, simplest to most committed, then a comparison and a recommended structure. All figures assume the £5 per month subscriber blog continues alongside whichever model is chosen.

Model 1: Pure One Off

Players buy individual plans whenever they want: £10 for a 6 week block, £20 for a 12 week block, identical across the mental performance and physical training lines.

Strengths	Weaknesses
Lowest barrier to a first purchase; £10 is an easy risk on an unknown brand. Simple to explain and build. No delivery scheduling needed.	Customer worth only £15 to £40 per year. Every season starts from zero; revenue depends entirely on campaign pushes. No upfront cash. Repeat purchase is hoped for, not secured.

Engaged customer value: £15 to £40 per year · Commitment required: none

Model 2: Season Pass (per product line)

£35 buys two 12 week plan deliveries for one product line (mental or physical): the pre season plan in January and the championship run up plan when the player's competition window approaches. Each is generated fresh at the time. One off plans remain available at £10/£20 as the entry product.

Strengths	Weaknesses
Cash collected upfront, early in the year. Repeat engagement is built in rather than hoped for. Natural checkout upsell: two plans for £35 instead of £40. Strong story: your plan arrives when your season needs it.	£35 is a bigger first ask, so it depends on the £10 entry product feeding it. Requires delivery scheduling and a championship date set per player. Discount sacrifices £5 per customer versus two one offs.

Engaged customer value: £35 to £70 per year · Commitment required: medium

Model 3: All In Season Pass (both lines)

£60 buys both product lines for the season: mental performance and physical training, each delivered at pre season and championship run up, four plan generations in total. Optionally includes the subscriber blog to sweeten the bundle. Sits above Model 2 as the best value anchor.

Strengths	Weaknesses
Highest individual customer value. Captures the most committed players in one decision. Makes the £35 pass look reasonable by comparison (price anchoring). Encourages use of both product lines, which deepens the habit.	£60 is a serious first purchase for an unproven brand; works as a tier for warmed up customers, not as a front door. Adds bundle complexity to the checkout and to delivery scheduling.

Engaged customer value: £60+ per year · Commitment required: high

Model 4: Annual Membership

One price, roughly £75 to £90 per year, includes everything: the subscriber blog, the full Gael Performance Toolkit, and all plan generations across the season on both lines. One decision, no other products to choose between.

Strengths	Weaknesses
Cleanest model to run and explain. Highest and most predictable revenue per member. One renewal moment per year. Closest to how clubs themselves charge membership, so it is culturally familiar.	Hardest first sale of the four. Kills the £10 low friction entry point, which is how sceptical club players will first try the product. Renewal risk concentrates in one annual moment. Best suited to a brand with proven trust, not a launch.

Engaged customer value: £75 to £90 per year · Commitment required: highest

Side by Side

	1. One Off	2. Season Pass	3. All In Pass	4. Membership
Price	£10 / £20	£35 per line	£60 both lines	£75 to £90 / yr
Customer value / yr	£15 to £40	£35 to £70	£60+	£75 to £90
First purchase barrier	Lowest	Medium	High	Highest
Cash timing	Spread, campaign led	Upfront	Upfront	Upfront
Repeat engagement	Hoped for	Built in	Built in	Built in
Best at	Earning first trust	Converting trust to commitment	Monetising the committed	A proven, trusted brand

Recommended Structure: The Ladder (Models 1 + 2 + 3)

These models work better together than in competition. The recommended launch structure is a ladder where each step is the natural upsell from the one below:

Step	Product	Role
Entry	£10 one off 6 week plan (£20 for 12 weeks)	The trust product. Low risk first try for sceptical club players
Core	£35 Season Pass per line (pre season + championship run up)	The value product, offered at checkout: two plans for £35 instead of £40
Top	£60 All In Season Pass (both lines, four deliveries)	Best value anchor for the most committed players
Alongside	£5 per month subscriber blog	Year round recurring base and the warm audience that feeds every step above
Phase 2	Club membership (to be priced with founding clubs)	Squad wide access sold to committees once individual demand is proven

Why hold Model 4 back

The annual membership is the strongest model for a trusted brand and the weakest for an unknown one. It is the natural evolution once the ladder has produced a base of All In Pass holders who renew, at which point those customers can be migrated to a membership with the blog folded in. Revisit after the first full season of pass renewals.

Revenue impact (illustrative, year one, ~300 buyers)

Scenario	Assumption	Year 1 revenue
One offs only (current plan)	400 plans at avg £15, 40 blog subs	£8,400
Ladder, conservative	A third of buyers upgrade to a pass, small All In uptake	£13,000 to £15,000
Ladder, strong	Half upgrade to passes, 10 percent take All In, 60 blog subs	£18,000 to £21,000

Same customers, different structure. The ladder raises year one revenue roughly 60 to 150 percent without finding a single extra buyer, because it converts repeat purchase risk into upfront commitment.

Decisions needed

- Confirm the ladder structure, or choose a single model
- Confirm price points: £35 single line pass and £60 All In, or adjust
- Decide whether the All In Pass includes the blog
- Decide the championship delivery trigger: player sets her date, or county based defaults
- Validate willingness to pay with the 15 pilot players before locking prices
